

BlueVoyant

Managed Security Services | MSS

Traditional Cybersecurity must be coupled with Advanced Tools and Deep Expertise. Help your IT Team Succeed

Businesses that have managed their own security for decades are finding it increasingly more complex to navigate and deliver proper cybersecurity. Networks have grown from desktops in offices into a complex ecosystem of smart phones, laptops, tablets and personal devices - in the office and in the cloud - exponentially increasing the attack surface of your company.

Traditional cybersecurity controls must be coupled with more advanced tools and augmented with expertise that can protect the organization's endpoints with services like Managed Detection and Response (MDR+) and Managed SIEM.

BlueVoyant's elite security professionals provide the intelligence needed to take industry-leading tools and make them robust, relevant and right-sized for your organization.

Nation states, organized crime and other adversaries have abundant time and resources that they're using to look at ways to exploit any network opening. Threat actors targeting intellectual property have figured out that it makes more sense to well-finance their attacks to steal your hard work than to develop their own. Financially motivated actors are extremely efficient at monetizing the information they steal.

Despite large enterprises spending millions of dollars to lock threat actors out, breaches make headlines daily. Couple this with the fact that their sophistication is now allowing them to easily turn their sights toward smaller businesses with little effort and big reward, threat actors are eager to prey on the vulnerable.

Don't be an easy target; be well prepared. With BlueVoyant's Managed Security Services, you can avoid the headlines and stop threat actors in their tracks, reducing or eliminating the damage caused by breaches.

WAVELENGTH™, CLIENT PORTAL

Our web-based client portal has an easy to understand representation of your security program.

Benefit: See the full context of incidents, assets, vulnerabilities and on-going investigations. In a world where other providers tell you what to do, we show you what we did.

REINFORCED SERVICE OFFERINGS

Our MSS Services, like MDR+ work in concert with DaaS or Managed SIEM, as well as Vulnerability Management Services.

Benefit: BlueVoyant is a cybersecurity force multiplier that is robust, relevant and right sized for your needs.

24/7 SECURITY OPERATIONS CENTERS

Geographically diverse SOCs staffed by former government and leading private sector experts are supported by the BlueVoyant Technology Platform.

Benefit: Experts are available and ready to handle alerts and attacks quickly long after your staff has gone home. SOCs minimize the impact of attacks and lower costs with real-time remediation and faster response times, continuously strengthening your security posture.

REDUCED ALERT FATIGUE

Consolidated processes and workflow orchestration, plus automation of security events and alerts helps to triage and reduce false positives.

Benefit: Reduces mean-time-to-resolve (MTTR) for cyber security incidents.

ROBUST TECHNOLOGY PLATFORM

BlueVoyant Technology Platform detects, blocks, and/or contains malware, ransomware, zero-days, non-malware and file-less attacks automatically.

Benefit: You don't have to buy another technology or shoehorn in another layer of cyber security.

ADVANCED THREAT INTELLIGENCE

Our proprietary, open-source, and dark web intelligence is leveraged to expedite triage and enrich investigations conducted by the SOC. Delivered as intelligence reports with new detections outlined with classifications of threat indicators.

Benefit: Greater threat intelligence translates into faster identification and remediation of security events. It also reduces the risk of data loss and business disruption due to successful attacks.

MANAGED DETECTION & RESPONSE (MDR+)

Advanced Threat Detection, Remote Investigation and Rapid Response

BlueVoyant's Managed Security Service protects businesses of all sizes against agile and well-financed cyber attackers. Moving beyond traditional MSSPs, we provide real-time monitoring, vulnerability detection and response, backed by our 24/7 global security operations centers.

We deliver better security outcomes for clients due to our superior Threat Intelligence, a view that extends far beyond the perimeter and immediate response capability of resource-constrained IT professionals.

Our proprietary, open-source, and dark web intelligence is leveraged to expedite triage and enrich investigations conducted by the SOC. Delivered as intelligence reports with new detections outlined with classifications of threat indicators.

DETECTION-AS-A-SERVICESM

Leveraging the BlueVoyant Platform and Deep Expertise to Monitor and Investigate Threats That Matter

The orchestration and automation of security events allows our analysts to zero in on threats that really matter. We leverage proprietary, open-source, and dark web intelligence to expedite triage and enrich investigations conducted by the SOC.

Summarized and prioritized Threat Intelligence reports are delivered to you via Wavelength™, the BlueVoyant Client Portal.

MANAGED SIEM

Making a Powerful Platform Available to Resource-Constrained Teams

BlueVoyant Managed SIEM provides your team with a dedicated Splunk® Enterprise environment, hosted by BlueVoyant. You'll have access to BlueVoyant SIEM and security detection and response expertise through our services.

Enjoy less frustration with platform administration. With Managed SIEM with BlueVoyant, you and your team can perform searches, develop correlations and execute analyses with the extra management burdens and expertise to get the most from Splunk® Enterprise.

Resource-constrained IT teams are overburdened trying to manage a variety of siloed cybersecurity products and respond to a constant barrage of alerts on all fronts. Top of the line security tools are expensive to purchase and require a team of experts in order to maximize their value. BlueVoyant takes a unique approach that includes a sophisticated method of detecting threats faster with the ability to contain and remediate security incidents in a timely manner.

Why Clients Choose BlueVoyant Managed Security Services

Companies turn to BlueVoyant for Managed Security Services when they realize that it makes more sense to outsource due to the complexity and expense of good cyber defense. They have invested in tools and technology that are too complex for their IT staff to fully utilize. Managed Security Services can trim high costs, assist with compliance reporting needs, respond and triage alerts while helping your team succeed in keeping threat actors out of your network.

As a cyber security services company, powered by big data analytics, our superior client results are driven by our data, our people and our platform.

The BlueVoyant team is led by cybersecurity experts from the best defended organizations and government agencies around the world. We minimize the impact of attacks by utilizing pre-approved playbooks to automate threat response, reducing the time an adversary spends on your network. Response time counts when your network is under attack. **We detect, investigate, and take action, so you don't have to.**
