

THE BLUEVOYANT TEAM

How strong are your existing security controls?

Today's threat actor has become increasingly sophisticated and adept at penetrating networks and applications. Standard security controls may not be sufficient to protect your business from devastating interruptions from well-planned and persistent threats. Defending your business from adversaries looking to exploit vulnerabilities takes trained experts and a proven methodology. An assessment of controls and processes from both within and outside the network can fully identify weak spots within your security posture. BlueVoyant's team leverages decades of knowledge of attacker behavior and advanced threats to ensure the security of our client's networks.

THE BLUEVOYANT ADVANTAGE

- **We Understand the Attackers Mindset** - Team of operators and testers with intimate knowledge of advanced adversary TTPs
- **We Provide Technical Expertise** - Recognized technical knowledge across multiple disciplines, including network, web application, and code level testing
- **We Take a Business-Centric Approach** - Solutions are tailored to our client's unique corporate environments and business needs
- **We Identify Emerging Threats** - Curated intelligence based on exclusive access to global internet traffic and dark web data

PENETRATION TESTING OVERVIEW

BlueVoyant tailors our penetration tests to our clients' organization's environment and needs. We assess the specific security posture of an organization's critical systems, networks, and applications. We factor in the malicious adversaries most likely to target your organization by capability, motivation, and intent, then we leverage our vast threat intelligence data set and field experience responding to sophisticated and persistent threats.

INTELLIGENCE DRIVEN

Leverage timely and relevant threat actor profiles to mimic realistic attack profiles and drive activities

METHODOLOGY BASED

Utilize a defined iterative testing methodology with agreed client authorization and communication touchpoints

RISK FOCUSED

Perform residual risk calculations which consider likelihood, impact, and currently implemented controls

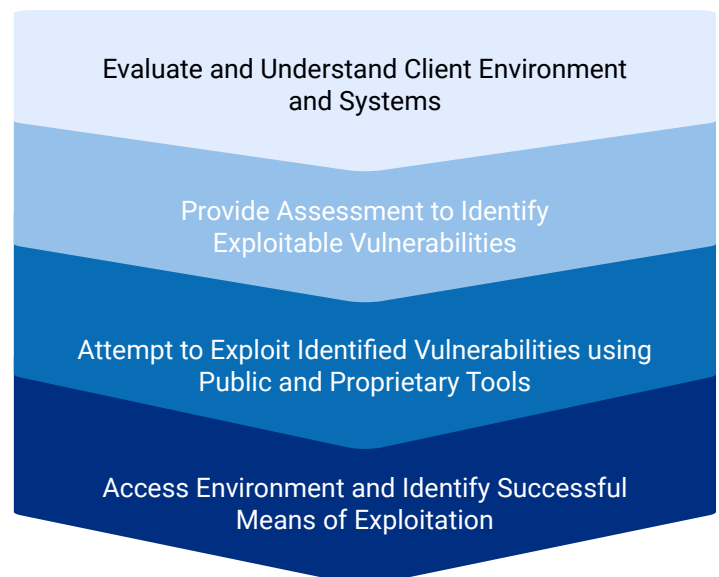

TAILORED SECURITY SOLUTIONS

Create organizationally relevant solutions with a meaningful impact on cybersecurity

BLUEVOYANT'S APPROACH

Our testing services leverage our competitive advantages to provide greater value to your organization. These core elements below show the mission behind our Proactive Testing services. But, what does that mean for you?

PENETRATION TESTING SERVICES OVERVIEW

BlueVoyant provides a range of penetration testing services based on the requirements of each client. Our tests enable us to provide recommendations which could efficiently secure the environment.

Just as attackers vary in terms of their strategy, depth of knowledge, and access to a network, our tests vary, enabling us to figure out myriad ways in which a threat actor might access your system.

Below is a brief list of some of the tests BlueVoyant offers its clients:

- Vulnerability Assessments
- Application Testing
- Social Engineering

DELIVERABLES

- Summary of engagement
- Details of findings and risk assessment
- Recommended actions and technical details of current risks
- Long term recommendations

WHY BLUEVOYANT IS DIFFERENT

Our penetration testing delivers comprehensible results and deliverables that set us apart from the competition. BlueVoyant spans three business units: Threat Intelligence, Managed Security Services, and Professional Services, which gives us a stronger approach to penetration testing.

- Our proprietary dataset allows us to fully understand your attack surface, including shadow IT infrastructure.
- Through our MSS offering, we see which cyber attacks are on the rise and relevant to your organization.
- Our experience responding to the latest cyber breaches enables us to prioritize recommendations to efficiently secure your organization.

ABOUT US

BlueVoyant is an analytics-driven cybersecurity company whose mission is to protect businesses of all sizes against agile and well-financed cyber attackers by providing unparalleled visibility, insight and responsiveness.

BlueVoyant provides Advanced Threat Intelligence, Managed Security Services and Professional Services. The company was founded by and is led by a team of senior business executives and former government cyber leaders from Morgan Stanley, Thomson Reuters, NSA, FBI, GCHQ and Unit 8200. BlueVoyant has offices in the United States, Israel, the United Kingdom, Spain and the Philippines.
